

How much receivers give back, round by round (Figure 8, eight-agent ladder)

Informed negative-only noise · No defectors · all 8 agents

Return ratio (returned / received)

Line = mean over runs, band = ± 1 sd over runs. Per run and round: total returned / total received over the games where something arrived. Return ratio is undefined in a round where nothing was received; such rounds are left out of the mean, and lines break where no run has a value.

—●— Game only —●— Game → Myth —●— Myth → Game - - - 1/3 = sender breaks even ····· 1/2 = gain split evenly
